## Grower Engagement

Dear growers,

For us, you are a very important partner in fruits safety and their transport. Only registered pesticides for cranberry in Canada and USA are to be used as the recommendations issued by the authorities (Rate, application methods and pre-harvest interval).

To meet the legal requirements linked with the food safety program, we need your collaboration on this points:

1. Your pesticides application report for the present harvesting must be sent us at least 7 days before the start off the harvest season. However, if other pesticides are applied after sending us your report, send us a revised copy as soon as possible.
2. The containers used for cranberries shipping to ATOKA Cranberries Inc. must be clean and free of any foreign material (dirt, rock, glass, asphalt, wood, etc...) to prevent the contamination of fruits. You must take appropriated measures so that the containers (trucks, trailers, bins...) are clean before cranberries transport to ours plant.

Fruits can't be received at ATOKA Cranberries Inc. if your cranberry pesticides application report isn't well completed, received, verified and approved. Also, Atoka Cranberries Inc. keeps the right to refuse unloading of a vehicle that is not cleanest. Composite samples will be randomly selected and analysed for pesticides residues.

Should you have any further question, please do not hesitate to contact us. Nevertheless, it's very important that, within a week from receiving this letter, you return us the enclosure dated and signed to confirm you commitment our requirements.

Many thanks for your precious collaboration.
