

Genetically modified Organism / Food GMO-Free

Dear Customer,

The products manufactured and distributed from ATOKA Cranberries Inc. are qualify as GMO free. By definition all organisms, and products, produced through techniques of genetic engineering and modification including but not restricted to recombinant DNA, cell fusion, encapsulation, macro and micro injection, gene deletion or magnification, and other techniques for altering the genetic composition of living organisms in ways, or with results, that do not occur in nature through mating or through traditional breeding techniques such as conjugation, hybrididization, or transduction.

Furthermore all cranberries purchased and used by ATOKA Cranberries Inc. are GMO-Free. The Cranberry Cultivars from which fruits are harvested have been improved using traditional breeding techniques (hybridization and natural mating). Therefore, 0% of the input as well as the finish product have been genetically modified. Also, all other ingredients used in the process of our cranberries are, to date, certified by our suppliers as GMO Free.

If you have any questions, please let me know.

Sincerely,

Jean-François Sylvain
